

# Cable Termination System

**POWER**  
HIGH VOLTAGE TEST

# Cable Termination System

The cable termination requirement is very high for testing 66kV or above XLPE cables.

Oil termination is to strengthen the insulation level of the dielectric and increase the field strength. But for 66kV or above 66kV XLPE cables, oil termination cannot meet the test requirements if only to increase the field strength; then we use water termination, the de-ionized water will make the electric field distribution average and meet the test requirement.

CTT cable test termination used for MV, HV and EHV insulation cable test. It can meet the relevant requirement and standard; this test termination can be used for the bellowing test:

- AC voltage test
- Partial discharge test and fault location
- Impulse voltage test (lightning impulse and switching impulse)
- Dielectric loss test
- Breakdown test
- Some other relevant tests

CTT cable test termination suitable for 66-500kV cable test, the Max diameter can be up to 165mm.

It equipped with CTW water treatment unit; based on the voltage level, the cable termination has two designs: A) above 150kV, cable insert to the termination insulation tube from bottom B) below 150kV, cable insert to the termination insulation tube from top.

CTT cable test termination is a double water tube system, de-ionized water is recycling inside. It is a closed water treatment system together with the water treatment unit CTW. Each cable connects to the water treatment unit through two water tubes.

Our cable termination structure design has changed the cable's electric field distribution and energy loss in the termination. The water treatment unit can control water's electrical conductivity and temperature.

Water treatment unit equipped with 500L water tank that for de-ionized water; two cable terminations and water treatment unit connected by four water tubes. Water flow rate is about 30 L / min or 60 L / min. Heat discharged to the outside through the heat exchanger.

## Water treatment device

# Cable Termination System

CWD series de-ionized purifying water devices take the intelligent control system and user-friendly design; they make the system more stable and easier to maintain. This set of device equipped with cooling unit that used to distribute the heat produced during the test, and maintain pure water conductivity that meet test requirements.

## Advantages

- Tube connection takes the quick connector.
- Large capacity water tank
- Automatic conductivity control
- Convenient resin replacement
- All parts corrosion-resistant
- Radiator power 120kW
- Remote operation function
- Low noise

## Technical parameters

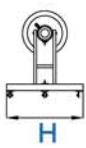

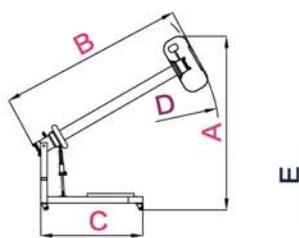

- Water tank capacity: 500L
- Water pressure: 4Bar
- Flow: 3000 or 4000L / h
- Maximum temperature (de-ionized water): 60 ° C
- Conductivity control range: 0.1 - 20 $\mu$ S/cm
- Maximum cooling capacity: 120kW
- Maximum ambient temperature: 35 ° C
- Minimum ambient temperature: 3 ° C
- Weight (not including water): 370kg
- Power supply: 50/60 Hz, 220 V / 16 A

### Annex 1 Models of Water termination

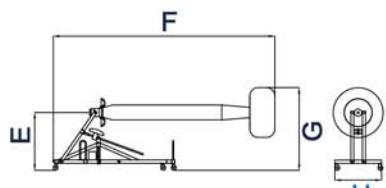

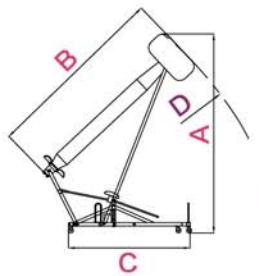

Model	Rated voltage		PD level		Cable diameter		Dimension						weight	Up/down	Water treatment
